FACADE MECHANICAL FIXING SYSTEMS

[WWW.VANTAGEHARDWARE.COM](http://WWW.VANTAGEHARDWARE.COM)

BE AN EXPERT IN BUILDING  
SYSTEM FIXATION

We combine functionality with attractive design Holding Tracks  
Optimum holding tracks for every facade and every wall material:

- . natural stone
- .ceramics tiles
- .aluminium wall panels
- . composite panels
- . fiber cement panels.
- .aluminium wall panels
- .bigger-size and small-size wall panels

For every kind of ventilated curtain wall system, Vantage has developed holding track systems. holding tracks are made from high-quality aluminium alloys suitable for all building heights. The requirements of DIN18516(outer wall claddings)are met.

## DETAILS OF APPLICATION

## Facades with natural stone

Facades with natural stone have shaped the appearance of our towns and cities for many centuries. Natural stone is deployed as a hard or a soft stone and in different forms and thicknesses. The fastening also varies. In addition to the traditional pin bearing system, you find today undercut fastening as well as fastening with milled grooves. With our systems, we are able to fasten natural stone to meet the passive house standard and avoid a permanent penetration of the building structures even with small size formats. The implementation of fire protection requirements is also ensured.

### L-Brackets Aluminium

|       |               |                |                |
|-------|---------------|----------------|----------------|
| WB0   | 40/40/3-85    | 40/40/3-160    | 40/40/3-250    |

| L 70/50 |

### Summary of Section

- section 1: horizontal
- section 2: vertical
- section 3: internal corner
- section 4: external corner
- section 5: window lintel
- section 6: window recess
- section 7: window sill
- section 8: bottom closure
- section 9: parapet

### holding tracks for nature stone

- 1. cladding panel
- 2. vertical holding track T or L profile
- 3. Aluminium L-bracket
- 4. holding track "AZM01"
- 5. holding bracket "AZZ01"

### section 1: horizontal

- 1. cladding panel
- 2. vertical holding track T or L profile
- 3. AZ AL-bracket
- 4. connecting rivet/screw
- 5. fixing rivet/screw
- 6. fixing anchor
- 7. thermal isolation
- 8. holding track "AZM01"
- 9. holding bracket "AZZ01"
- 10. locking screw
- 11. undercut anchor
- 12. distance washer bolt

## Facade of sections

### section2:vertical

- 1.cladding panel
- 2.vertical holding track
- 3.AZ L-bracket
- 4.connecting rivet/screw
- 5.fixing rivet/screw
- 6.anchor
- 7.thermal isolation
- 8.holding track "AZM01"
- 9.holding bracket "AZZ01"
- 10.locking screw
- 11.undercut anchor
- 12.distance washer
- 13.adjustment plate bolt

### section3: internal corner

- 1.cladding panel
- 2.vertical holding track T or L profile
- 3.AZ aL-bracket
- 4.connecting rivet/screw
- 5.fixing rivet/screw
- 6.anchors
- 7.thermal isolation
- 8.holding track "AZM01"
- 9.holding bracket "AZZ01"
- 10.locking screw
- 11.undercut anchor
- 12.distance washer bolt

### section4: external corner

- 1.cladding panel
- 2.vertical holding track T or L profile
- 3.AZ aL-bracket
- 4.connecting rivet/screw
- 5.fixing rivet/screw
- 6.anchor
- 7.thermal isolation
- 8.holding track "AZM01"
- 9.holding bracket "AZZ01"
- 10.locking screw
- 11.undercut anchor
- 12.distance washer bolt

### section5: window lintel

- 1.cladding panel
- 2.vertical holding track T or L profile
- 3.AZ aL-bracket
- 4.connecting rivet/screw
- 5.fixing rivet/screw
- 6.fixing anchors
- 7.thermal isolation
- 8.holding track AZM01
- 9.holding bracket "AZZ01"
- 10.undercut anchor
- 11.distance washer bolt
- 12.reveal plate
- 13.reveal angle
- 14.undercut anchor

### section6: window recess

1. cladding panel
2. vertical holding track T or L profile
3. AZ aL-bracket
4. connecting rivet/screw
5. fixing rivet/screw
6. fixing anchor
7. thermal isolation
8. holding track AZM
9. holding bracket for AZM
10. locking screw
11. non-expanding anchor bolt
12. distance washer
13. reveal plate
14. reveal angle
15. undercut anchor

### section7: window sill

1. cladding panel
2. vertical holding track T or L profile
3. AZ aL-bracket
4. connecting rivet/screw
5. fixing rivet/screw
6. fixing anchor
7. thermal isolation
8. holding track AZM
9. holding bracket AZZ
10. locking screw
11. undercut anchor
12. distance washer
13. adjustment plate
14. AZ a windowsill bolt

### section8: bottom closure

1. cladding panel
2. vertical holding track
3. AZ aL-bracket
4. connecting rivet/screw
5. fixing rivet/screw
6. fixing
7. thermal isolation
8. holding track
9. holding bracket
10. undercut anchor
11. distance washer
12. ventilated angle bolt

### section9: parapet

1. cladding panel
2. vertical holding track
3. Syste aL-bracket
4. connecting rivet/screw
5. fixing rivet/screw
6. fixing
7. thermal isolation
8. holding track U BE"NG 2"
9. holding bracket for U BE"NG 2"
10. locking screw
11. non-expanding anchor bolt
12. distance washer

## Holding tracks for facade wall

### Substructure for natural stone panels with rear clasps

Aluminium/stainless steel substructure for the concealed fastening of facade panels, e.g. natural stone or carrier plates with rear clasps with a large travel and adjustment range as well as reinforced horizontal mounting rails. Projections up to 480mm. Depending on the wall brackets, fire protection requirements can be implemented and the passive house standard is possible.

### Substructures for natural stone panels with a pin bearing

Aluminium/stainless steel substructures for the fastening of natural stone in the panel joints with a pin bearing. In the systems, the traditional pin support is installed on a vertical profile. Through the combination of the pin support with a substructure, you reduce the drilling effort in the building structure, and large loads in the the passive house standard with high insulation package thicknesses can be implemented. Depending on the wall brackets, fire protection requirements can be implemented and the passive house standard is possible.

### Holding tracks for ceramic wall panels (clip-on fixing)

Aluminium/stainless steel holding tracks for visible clip-on fixing of small-size and large-size ceramic wall panels. The holding tracks consist of vertical T-profiles with dimensions as per static requirements placed in each vertical panel joint. Protrusions of up to 480mm.

### Holding tracks for glued-on wall panels

Aluminium/stainless steel holding tracks for invisible fixing of profiled aluminium wall panels and flat wall panels. The subconstruction consist of vertical angled profiles and T-profiles with dimensions as per static requirements and brackets with standard protrusions of up to 480mm.

## Holding tracks for facade wall

### Holding tracks for ceramic panels

Aluminium/stainless steel subconstruction for invisible clip fixing of terracotta panels. The construction consists of brackets and vertical holding tracks. The holding tracks are either used for mounting different holding clips or different system rails including their specific holders. The brackets are used to form sliding points and fixed points. The sliding points only bear horizontal loads, the fixed points bear horizontal and vertical loads with standard protrusions of up to 480mm.

### Subconstructions for ventilated facades

Aluminium/stainless steel holding tracks for visible fixing of profiled aluminium wall panels and flat wall panels. The subconstruction consists of vertical angled profiles and T-profiles with dimensions as per statical requirements and brackets with standard protrusions of up to 480mm.

### Holding tracks for wall panels of composite material

Aluminium/stainless steel holding tracks for visible fixing of facade panels made of composite material. The sub construction consists of vertical angled profiles and T-profiles with dimensions as per statical requirements and brackets with standard protrusions of up to 480mm.

### Holding tracks for profiled aluminium sheets and flat wall panels (up to floor height)

Aluminium holding tracks for visible fixing of profiled aluminium wall panels and flat wall panels. The subconstructions consist of U-brackets and vertical hollow box profiles allowing for fixing in the floor slabs at floor height. Protrusions of Up to 180mm.

### Holding tracks for cassettes of composite

material Aluminium/stainless steel holding tracks for concealed fixing of composite panels with vertical grid hung with bolts or for concealed fixing with adjustable slides. Protrusions L-Brackets of up to 480mm, Protrusions U-Brackets of up to 180mm.

# AZZ Anchor Fixing Systems-Technical Details

- Direct fixing into concrete walls with expansion bolts. Indirect fixing into sub channel system with hex bolts.
- Three dimensional adjustability - Quick and easy fixing.
- Installation at horizontal and vertical joints.
- Recommended projection sizes up to 135 mm & loads up to 800 N.

**AZZ01**  
Z Anchor

**AZZ02**  
Soffit Anchor

**AZZ03**  
Z Anchor  
For large projections

**AZZ04**  
Restraint Anchor

## Three dimensional adjustability

1) Vertical adjustment is provided by the slotted hole. The anchor is fixed on to the bolt with the serrated washer at the desired level.

2) Adjustment of the projection size is provided by rotating the adjustable arm. The adjustable arm is locked with the hexagon nut.

3) Adjustment of the anchor left and right is provided by sliding the body up to 15 degrees side ways.

## Installation at horizontal joints

## Installation at vertical joints

- Suitable for concrete walls. Anchors are fixed directly on to concrete walls with expansion bolts.
- Recommended projection size between 45 mm to 135 mm and loads up to 800 N.
- In horizontal joint installation, slabs are pinned on the bottom and upper sides. Anchors act as load bearing carrying half the weight of the slabs above. Anchors also act as restraints, holding the slabs below and restraining against wind suction and pressure.
- In vertical joint installation slabs are pinned on the left and right sides. Anchors on the bottom are load-bearing anchors carrying the whole weight of the slab. Half the weight of the slab on the left and half the weight of the slab on the right. Anchors on the top are restraint anchors holding the slabs and restraining against wind suction and pressure.
- Three - dimensional adjustability allows quick and easy installation.
- The design and structural calculations of these anchors are made in our technical department. Special design and manufacturing can be made for the requirements of each project.

- Material : Stainless Steel 1.4301 (A2) & 1.4401 (A4).
- Table above is prepared according to LGA test results.
- Loads stated are characteristic resistance loads.
- Bolts are provided separately.
- Max Wind pressure: 350 N
- Test results are available upon order.

AZZ01 type Z anchors with standard sizes. Different types available according to desired method of fixation.

Product code description

**AZZ01** - 330 / 10 A

- Anchor type
- Anchor body size (mm)
- Adj. arm M size (mm)

# Z Anchor Fixing Systems-Installation Details

## Installation at horizontal joints

## Installation at vertical joints

## AZ Z Anchor - Special Applications Details

### AZZ02 Soffit Anchor

Required for installing soffit slabs.

### AZZ03 Z Anchor - for large projection sizes.

Required for projections over 150 mm.

### AZZ01S Z Anchor - with wedge washer.

Required where loads are over 800 N where serrated washers may not be strong enough for no slip feature.

### Special Designs

Z Anchors are fixed on sub frame to install cornice lining.

Z Anchors are fixed on to special steel structure for cornice parapet installation.

Z Anchors are fixed on to special steel structure for special area installation.

# A L Anchor Fixing Systems-Technical

- Direct fixing into concrete walls with expansion bolts. Indirect fixing onto sub channel system with hex bolts.
- Economical & easy fixing.
- Installation at horizontal joints.
- Adjustability provided through adjustable plates and slot pin holes.

**AZ01** L Anchor

**AZ02** L Anchor  
Double pin

**AZ03** L Anchor  
With Kerf

**AZ04** L Anchor  
With Adjustable plate

## Adjustability

1. Vertical adjustment is made through the slot hole. The anchor is fixed on to the bolt with the serrated washer and nut.

2. A slot pin hole can be provided to enable lateral adjustment of the pin.

3. Greater projection sizes can be achieved by using shims. Shims are placed at the back of the anchor.

4. An adjustment plate is available in HA04 & HA05 type L anchors where adjustment of the projection size can be made.

## Installation at horizontal joints

### AZ01 Anchors

- Suitable for concrete walls. Recommended projection sizes up to 55 mm.
- Slabs are pinned at the bottom and upper sides.
- Adjustability for projection size can be done by inserting shims between the anchor and the wall.
- Anchors act as load bearing and restraint, carrying the slabs above and restraining the slabs below.

### AZ03 L Anchors

- Suitable for concrete walls. Recommended projection sizes up to 55 mm.
- Slabs have slits and the kerf parts of the anchors are inserted in to the slit edges of the slabs.
- Adjustability for projection size can be done by inserting shims between the anchor and the wall.
- Anchors act as load bearing and restraint, carrying the slabs above and restraining the slabs below.

### AZ04 L Anchors

- Suitable for concrete walls. Recommended projection sizes up to 180 mm.
- Slabs are pinned from the bottom and upper sides.
- Adjustability of the projection size is enabled with the adjustable plate, which is fixed to the body with hex bolts.
- Anchors act as load bearing and restraint, carrying the slabs above and restraining the slabs below.

## AZ 01 L Anchor - Technical Details

- Material: Stainless Steel 1.4301 (A2) & 1.4401 (A4).
- Table above is prepared according to DIN 18516 standard.
- Loads stated are working resistance loads.

- Other sizes are available for production upon request.
- Bolts are provided separately.
- Structural calculation reports are available upon order.

### HRS3 Restraint Anchor

- Load bearing & restraint
- Limited adjustability
- Fastened on to load bearing walls with expansion bolts and on to channels with set screws
- Projection sizes between 30 and 35 mm
- Suitable for horizontal

- Loads up to 400 N
- Stone thicknesses above 20 mm

#### Product code description

# L Anchor Fixing Systems-Installation Details

## Installation at horizontal joints

In this instance the dead load of the slab is divided by two, as half the weight of the slab is transferred to the load bearing anchors.

## Installation at horizontal joints

## Installation at vertical joints

## AZ02&AZ03 L Anchor - Technical Details

### AZ02 L Anchor

- Load bearing & restraint.
- Projection sizes between 30 and 55 mm.
- Loads up to 400 N.
- Suitable for horizontal joints.
- Stone thicknesses above 20mm.
- Fastened on walls with expansion bolts.
- Stone installation is made with a single anchor on each side.

### AZ03 L Anchor

- Load bearing & restraint.
- Projection sizes between 30 and 55 mm.
- Loads up to 400 N.
- Suitable for horizontal joints.
- Stone thicknesses above 20mm.
- Fastened on walls with expansion bolts.
- Installation is made with kerf system where there are slit edges in the slabs.

# Cast-in-channel

Cast in Channels are suitable for various types of construction connections, for example; façades, precast concrete elements, stadium seating, in civil engineering (fixing of tunnel signals) lift guide rails, crane runway, pipe fixings under bridges

# Cast in channel-Technical Details

Stress ranges of the PTA Anchor channels at right angles to the channel longitudinal axis

GTA series channels are able to absorb central pull, transverse shear and shear load in accordance with the stress ranges illustrated. In this case, the resultant load must not exceed the allowable loads according to the table shown below.

## Allowable loads

Profile

Allowable loads [kN]

Central pull and transverse shear

Shear load

### Determination of necessary bolt length

- L = Length of bolt
- L<sub>k</sub> = Thickness of connection part
- f = Thickness of profile
- m = Height of nut
- u = Overlap of bolt

Necessary screw length in mm:  
Nec. L = L<sub>k</sub> + f + (m + u)

| Bolt | m + u [mm] |
|------|------------|
| M 6  | 8,8        |
| M 8  | 11,3       |
| M 10 | 13,9       |
| M 12 | 17,3       |
| M 16 | 21,8       |
| M 20 | 27,0       |

Stainless steel (grade 304 316), Strength class 50/70

## Cast in channel-Technical Details

GXA Cast-in channel 41/22\*  
Load capacity 5.0 + 7.0 kN\*\*

GXA 41/22

| Length [mm]   | Anchors | Anchor distance s [mm] |
|---------------|---------|------------------------|
| 100           | 2       | 50                     |
| 150           | 2       | 100                    |
| 200           | 2       | 150                    |
| 250           | 2       | 200                    |
| 300           | 2       | 250                    |
| 350 - 550     | 3       | ≤250                   |
| 600 - 800     | 4       | ≤250                   |
| 850 - 1050    | 5       | ≤250                   |
| Cut lengths   |         |                        |
| 1050 - 6000   |         | ≤250                   |
| 6000 (-0/+50) | 25      | ≤250                   |

Material:  
Hot dip galvanized (FV)  
Stainless steel (grade 304 + 316)

Length(mm) From(15-200mm)

Allowable loads,bending moments and tightening torque

| Thread | Allowable Loads |            | Allowable bending moments |            | Tightening torque [Nm] |
|--------|-----------------|------------|---------------------------|------------|------------------------|
|        | 8.8 [kN]        | A4-50 [kN] | 8.8 [Nm]                  | A4-50 [Nm] |                        |
| M 12   | 19,4            | 9,3        | 43,7                      | 15,3       | 50,0                   |
| M 16   | 36,1            | 17,3       | 111,0                     | 38,8       | 90,0                   |

Standard type: Electrogalvanized (GV), Strength class 4.6/8.8  
Stainless steel (grade304 316), Strength class 50/70

# Cast in channel-Technical Details

Designed for the projects of underground pipeline colligate alure in city Utility tunnel

GTA Cast-inchannel 38/23\*  
Load capacity 12.0 + 16.8 kN\*\*

GTA 38/23

| Length [mm]     | Anchors | Anchor distance s [mm] |
|-----------------|---------|------------------------|
| 150             | 2       | 100                    |
| 200             | 2       | 150                    |
| 250             | 2       | 200                    |
| 300             | 2       | 250                    |
| 350 - 550       | 3       | <250                   |
| 600 - 800       | 4       | <250                   |
| 850 - 1050      | 5       | <250                   |
| Cut lengths     |         |                        |
| 1050 < L < 6000 |         | <250                   |
| 6000 (-0/+50)   | 25      | <250                   |

Material:  
Hot dip galvanized (FV)  
Stainless steel (grade 304 + 316)

Length(mm) From(35-150mm)

Allowable loads,bending moments and tightening torque

| Thread | Allowable Loads |            | Allowable bending moments |            | Tightening torque [Nm] |
|--------|-----------------|------------|---------------------------|------------|------------------------|
|        | 8.8 [kN]        | A4-70 [kN] | 8.8 [Nm]                  | A4-70 [Nm] |                        |
| M 12   | 19,4            | 12,6       | 43,7                      | 32,8       | 80,0                   |
| M 16   | 36,1            | 23,6       | 111,0                     | 83,3       | 120,0                  |

Standard type: Electrogalvanized (GV), Strength class 4.6/8.8  
Stainless steel (grade304 316), Strength class 50/70

# Hot Production Show

## APPLICATION EXAMPLES

USA WSECU

Lincoln 4S store

Denning House

Canada Private Villa

French Manor

Faena Aleph

China BUD office

Australia St James Church

## APPLICATION EXAMPLES

Spanish city medical center

The office of Thailand, PTT

Holland sold 11 building

Canadian Institute of Physics

The police station of mulberry forest, Australia

King Abdullah University of Science & Technology

Spanish public housing

National Library of Sejong City
